

## Penile Enlargement Surgery for Male Enhancements

Urology Surgeon, Dr. Ricardo, performing Surgery LIFE Enhancement on a health 41 y/o male patient.

The male urinary tract is carefully considered during male penile enlargement surgery and throughout all phases during the post-operative care process. Wrapping the penis after enhancement procedures is essential to control adverse swelling or unnecessary bruising. Wrapping the penis after surgical or non-surgical penis enlargement treatments also helps avoid retraction.

Penile retraction is a common occurrence in penile enlargement surgeries, SLE has perfected traditional approached to phalloplasty procedures by moving the surgical entry scar from above the base of the penis (suprapubic) region to the folds of the testicle skin.

### Sexual Dysfunctions Urology Interventions for Men

Male urinary tract symptoms make up the majority of sexual dysfunctional issues men are afflicted with; often men utilize urology interventions to remedy issues of sexual dysfunction.

Urology treatments for sexual dysfunction include surgical and pharmacological treatments. Males are often treated over several months and symptoms may be improved with the use of penis pumps, or surgically placed penile implants.

Surgically placed implants include: semi-rigid or malleable rods, two-piece inflatables, and three-piece inflatable implants. To work the implant, pumps are placed in the scrotum and a fluid-filled bladder is placed in the abdominal region.

### **Common Sexual Dysfunctions and Symptoms - Lower Urinary Tract Symptoms (LUTS)**

Dysfunctions left untreated may be exacerbated by time and should be addressed at the earliest onset of symptoms or conditions including:

- nocturia
- erectile dysfunction
- impotence

Male improvements are a leading utilizer of urology and other male based, specialized healthcare providers. Sexual disorders such as body dysmorphic disorder may be inappropriately addressed with surgical treatments which do not improve upon the physical functions of the penis.
